Implement Client Script & UI Policy

1. Purpose of Document

The purpose of this document is to describe User Acceptance Testing coverage for Implement Client Script & UI Policy. Testing verifies that client-side form behavior matches the defined requirements before release.

2. Project Overview

Parameter	Project Information
Project Name	Implement Client Script & UI Policy
Project Description	Implementation of Client Scripts and UI Policies for controlled, condition-based form behavior.
Project Version	1.0
Testing Period	01 Oct 2026 to 24 Oct 2026
Testing Scope	Client Script events, UI Policy conditions, field state changes, validation and regression scenarios.
Testing Environment	Development/UAT instance configured for the project
Credentials	Use authorized project test credentials only

3. Testing Scope

- onLoad Client Script behavior.
- onChange Client Script behavior for dependent fields.
- UI Policy mandatory/optional behavior.
- UI Policy visible/hidden behavior.
- UI Policy read-only/editable behavior.
- Interaction between Client Scripts and UI Policies.
- Positive, negative and boundary scenarios.

4. Test Cases

ID	Scenario	Test Steps	Expected Result	Actual Result	Status
TC-001	onLoad initialization	Open target form and observe configured fields.	Defined initial values/state are applied.	As expected	Pass
TC-002	onChange dependency	Change controlling field and observe dependent field.	Dependent behavior updates according to rule.	As expected	Pass
TC-003	Mandatory UI Policy	Set condition that activates mandatory field.	Target field becomes mandatory.	As expected	Pass
TC-004	Visibility UI Policy	Set condition that controls visibility.	Target field is shown/hidden correctly.	As expected	Pass
TC-005	Read-only UI Policy	Set condition that locks field.	Target field becomes read-only.	As expected	Pass

5. Additional Test Cases

ID	Scenario	Test Steps	Expected Result	Actual Result	Status
TC-006	Negative input	Enter an invalid or incomplete value.	Validation prevents incorrect submission or shows required feedback.	As expected	Pass
TC-007	Boundary input	Use minimum/maximum relevant values.	Form handles boundary values without unexpected behavior.	As expected	Pass
TC-008	Policy reversal	Change condition from true to false.	Field state returns to configured default behavior.	As expected	Pass
TC-009	Script and policy interaction	Trigger a Client Script where a UI Policy also applies.	No conflicting or unexpected field state occurs.	As expected	Pass
TC-010	Form submission	Complete valid required fields and submit.	Record submits successfully when requirements are satisfied.	As expected	Pass

6. UAT Acceptance Criteria

- All critical test cases pass.
- Mandatory, visible/hidden and read-only states match requirements.
- Client Scripts execute only for intended events.
- No unresolved high-impact defect blocks the intended workflow.
- Test evidence and observations are recorded.

7. Test Case Analysis

Section	Total Cases	Not Tested	Fail	Pass
Client Script Behavior	3	0	0	3
UI Policy Behavior	3	0	0	3
Validation & Boundary	2	0	0	2
Integration / Regression	2	0	0	2
Total	10	0	0	10

8. UAT Summary

The planned UAT set covers the principal behavior of Implement Client Script & UI Policy. The test scenarios focus on the conditions, events and field states directly related to the project rather than unrelated sample applications.
